

In my part-time job I work with a radio telephone. My phone sits next to computer audio speakers. My speakers on the computer start making noise 3 seconds before I ever receive a phone call. You have to believe that cell phones can interfere with frequencies and interrupt. I experience this everyday on the ground.

- There is no hard evidence that cell phone use doesn't interfere with navigational instruments.
- Cell phone use would enable terrorists to coordinate a plan of action more effectively.
- The NPRM would leave it up to flight attendants to police the use of cell phones onboard the aircraft compromising our ability to maintain a safe, secure cabin environment and to conduct emergency evacuations.
- It would make an already tense cabin environment even more stressful.
